DETAILED ACTION

This application is a continuation of copending application 09/057,995.

Claims 1-23 are pending.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to a composition comprising a modified form of an *Aequorea* GFP, classified in class 530, subclass 350.
- II. Claim 16, drawn to a nucleotide encoding a modified form of an *Aequorea* GFP, classified in class 536, subclass 23.5.
- III. Claims 17-23, drawn to methods of use of a nucleotide encoding a modified form of an *Aequorea* GFP, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are patentably distinct because a protein and a nucleotide are different compounds each with its own chemical structure and function, and they have different utilities. DNA molecules of invention II can be used for the production of a modified protein of invention I and as hybridization probes. A modified protein of invention I can be obtained by a materially different method such as by the chemical synthesis.

Art Unit: 1652

Inventions II and III are related as product and method of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). Invention III comprises several different methods of use of a nucleotide of invention II. A nucleotide of invention II can be used in each of them. These methods employ different protocols, chemicals, instruments and have different utilities. Furthermore, a DNA molecule of invention II is not limited in use in various methods of invention III but can be used for the production of a modified fluorescent protein or as a hybridization probe.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their divergent subject matter, fall into different statutory classes of invention, and are separately classified and searched, restriction for examination purposes as indicated is proper.

A telephone call was made to Ms. Ginger Dreger on March 14, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1652

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(l).
